Core Objectives:

**Secure User
Management
(JWT)**

**Dynamic Feed
& Social
Interactions**

Functional Requirement

Req.I D	Requirement Name	Detailed Description	Type
01	User Authentication	Users must be able to register, log in, and log out securely using email and password, protected by JWT.	Functional Requirement
02	Media Upload	Users must be able to upload images for posts and stories directly from their local device to cloud storage.	Functional Requirement
03	Advanced Story Editing	Users must be able to add, resize, and position stickers, text, and freehand drawings over story media.	Functional Requirement
04	Dynamic Social Feed	The system must display a chronological feed of posts and a horizontal panel for active user stories.	Functional Requirement
05	Social Interaction	Users must be able to like or unlike posts with immediate visual feedback in the UI.	Functional Requirement
06	Reel/Video Viewing	The system must support vertical video playback with auto-play and scroll-to-view functionality.	Functional Requirement
07	Performance (UX)	Media assets (images/videos) must load within 2 seconds using a Content Delivery Network (CDN) to minimize latency.	Functional Requirement

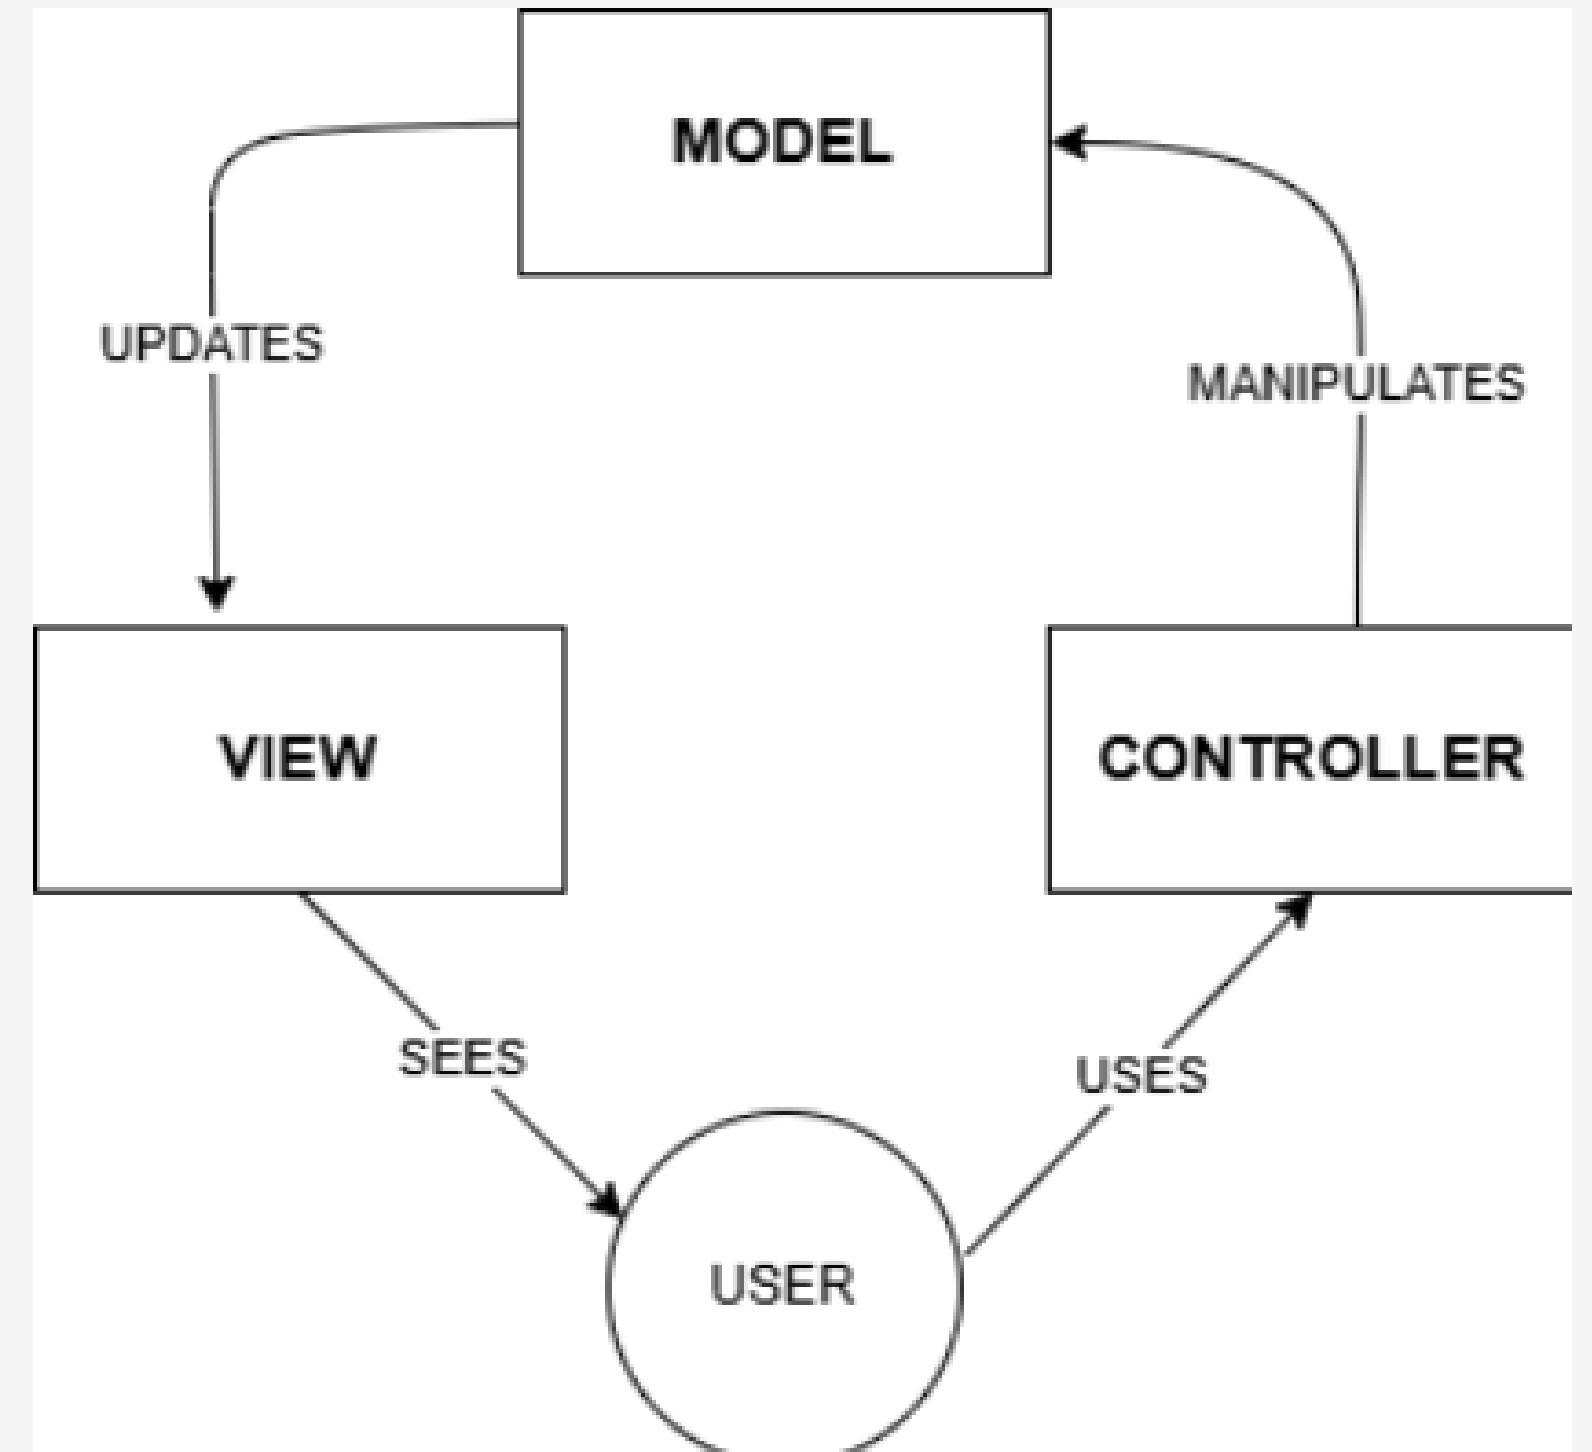

Non-Functional Requirement

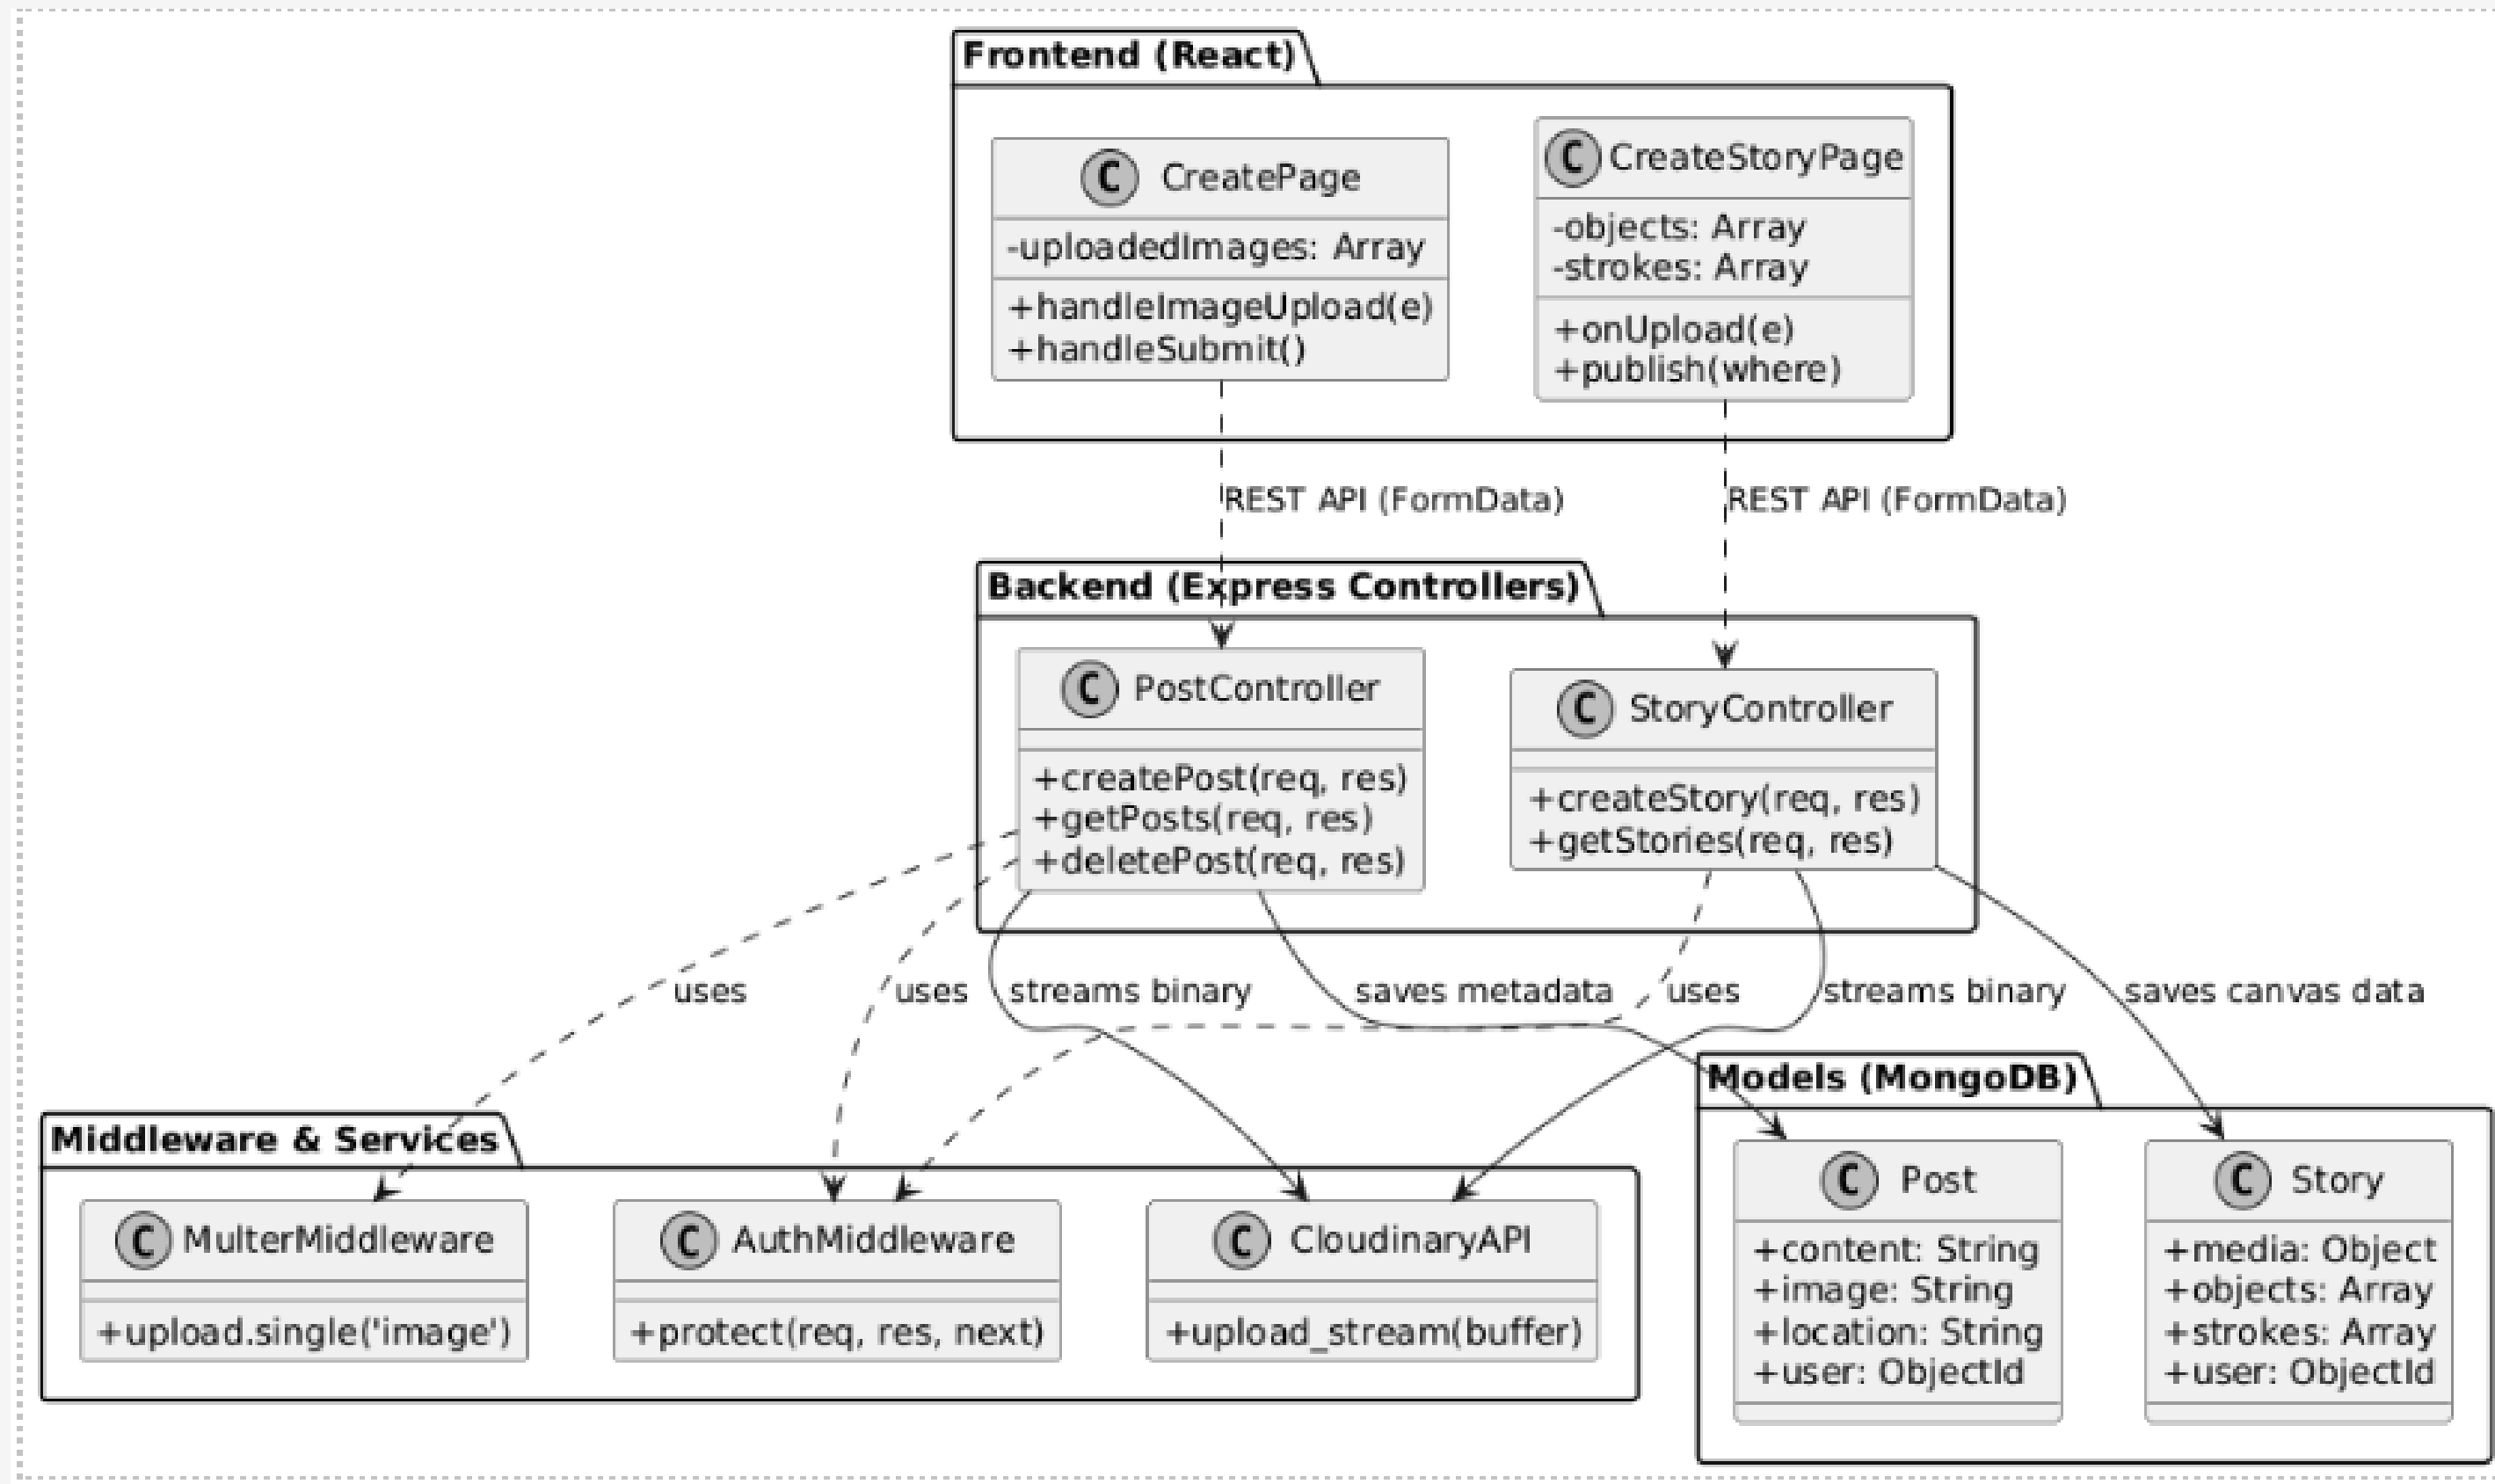

08	Security (Data)	Private routes and sensitive actions (delete/post) must require a valid JWT for authorization.	Non-functional Requirement
09	Scalability	The storage architecture must handle large media files without impacting the speed of the primary database queries.	Non-functional Requirement
10	Usability	The content creation interface must provide real-time visual previews of edits before final submission.	Non-functional Requirement
11	Responsiveness	The application layout must adapt seamlessly across desktop, tablet, and mobile screen dimensions.	Non-functional Requirement
